

ACM'27 — 2nd International Workshop on AI-native Connected Mobility

WHEN

9 January 2027

CCNC 2027: 9-12 January

WHERE

Las Vegas, NV, USA

PART OF

IEEE CCNC 2027ccnc2027.ieee-ccnc.org

SCOPE

Vehicles, roadside units, and edge-cloud platforms increasingly act as networked, data-driven agents. ACM'27 focuses on the co-design of AI, communication, and computing for connected mobility. Accepted papers appear in the IEEE CCNC 2027 proceedings and IEEE Xplore.

TOPICS OF INTEREST

1. AI and foundation models for connected mobility

- LLMs and VLMs for connected mobility platforms
- Semantic reasoning over V2X messages and sensor streams
- Communication-efficient inference and split execution
- AI for interaction, planning, and decision support

2. Cooperative perception and networked decision-making

- V2V, V2I, and V2N cooperative perception
- Multimodal fusion across vehicles and infrastructure
- Real-time sensing-communication-compute pipelines
- Integrated sensing and communication (ISAC) for mobility

3. Infrastructure and protocols for scalable mobility AI

- AI-native protocol and cross-layer design
- Learning-based scheduling and resource orchestration
- Vehicle-edge-cloud AI workload orchestration
- 6G and wide-area connectivity for mobility systems

IMPORTANT DATES

Paper deadline (extended)	19 Oct 2026
Notification	10 Nov 2026
Camera-ready	23 Nov 2026
Workshop	9 Jan 2027

SUBMIT VIA EDAS

Submit ACM'27 paper

SUBMISSION

- IEEE conference proceedings format
- Maximum **6 pages** (+ up to 3 camera-ready, US\$100/page)
- IEEE CCNC 2027 / IEEE Xplore; author must register and present

WORKSHOP CO-CHAIRS

Kyungtae (KT) Han

Toyota Motor North America, USA

Ming Zhao

Arizona State University, USA

Haoxin Wang

Georgia State University, USA

Sanjeewa Herath

Toyota Motor North America, USA
